Flat computers

Laptops are small, light personal computers for mobile use. They have most of the same components as computers including a screen, speakers and a to write/type with. In the 1970s, IBM the first company to make and sell these mobile computers. At first, laptops didn't to have batteries and the screens were black and white and very small. Later, in the 1990s, colour screens more popular. Nowadays, laptops are more popular than any other type of computer.

USE OF ENGLISH

collect develop do follow protect remain sit walk ✓

The Giants of Georgia

In 2008, a farmer with his animals through the Caucasus Mountains in Georgia. He used this often, but on this day he saw the unusual of an old stone structure. The farmer decided to explore the area. Inside the structure were two human skeletons. They on chairs in front of a table. What was so interesting? The bodies were extremely large.

He contacted a team of archaeologists. On the way there, they saw some very large statues and what seemed to be a large stone road through the forest.

The scientists evidence (i.e. some of the bones) and took it to Tbilisi, the capital city of Georgia. They asked Professor Vikua, famous for discovering Homo Erectus Georgicus, to help them, but he died before he could do any research. When the scientists looked for the bones that Professor Vikua had, they could not find them.

In 2014, the Science Channel opened a new investigation, but they haven't found any new evidence or a theory to explain these mysterious giant bones.

USE OF ENGLISH

Exercise 10

Choose the correct answers.

In this activity you will be graded on **capitalization (lowercase and UPPERCASE)**.

Example: **i think james isn't fun. x I think James isn't fun. ✓**

A job advert from space

Are we in danger from visitors from other planets? Are the astronauts that we into space making life on this planet dangerous?

Last week while I a science magazine, I found this interesting article. NASA, it said, were looking for someone to help them experiments on the organisms that astronauts regularly collect during their trips into space. The job is to notes on what you observe during these tests, and then work with other scientists looking closely at the data.

Your research may help protect Earth against a future alien invasion. But, NASA hopes, one day the results of your work might help them to new life on other planets. They might also help mankind

parts of the universe where no man or woman has ever visited before. What a great job!
